

Water Reading Information:

The letter code next to your reading number indicates how it was read. An “ACT” means it as an actual read obtained by our meter reader. An “EST” means it was an estimated read, this usually means there was a problem with the reading obtained by the Water Division’s reading equipment and you should contact the Water Division to have the Water Division Personnel resolve the problem. The Water Division can be contacted between 8:00 AM – 4:00 PM, Monday-Friday, at 508-945-5150.

Consumption Conversion:

This water bill was calculated in cubic feet.

The consumption is stated in units of 1, 1 representing 100 cubic feet.

There are 7.48 gallons per cubic foot or 748 gallons per 100 cubic feet.

To calculate cubic feet into gallons:

Multiply the number of consumption units by 748.

Example: Using the number 10 in the Consumption Box, 10 units x 748 = 7480 gallons consumed.
